1. Executive Summary & Introduction

SmartAP is an AI-powered accounts payable (AP) automation platform designed for SMEs and mid-market firms. It leverages **Foxit APIs** to transform the manual, error-prone process of invoice handling into a streamlined, high-ROI digital workflow.

A. Executive Summary

Manual invoice processing is a significant bottleneck for finance departments, leading to delayed payments and increased risk of fraud. SmartAP automates the lifecycle of an invoice—from ingestion and data extraction to reconciliation and final approval. By integrating **Foxit's OCR and PDF technology** with modern AI, SmartAP achieves high **Straight-Through Processing (STP) rates**, allowing teams to focus on strategic financial planning rather than data entry.

Value Proposition of SmartAP

The **SmartAP** platform is designed to solve the critical challenges of modern accounts payable departments. By implementing this solution, organizations can expect:

- **High ROI for Finance Departments:** Automates labor-intensive tasks like manual entry and reconciliation, leading to significant cost savings.
- **High Straight-Through Processing (STP):** Achieves a high rate of automated processing (95.5% in prototype), minimizing the need for human intervention.
- **Reduced Financial Risk:** AI-powered detection flags potential fraud, duplicate billing, and discrepancies between invoices and purchase orders.
- **Enhanced Data Accuracy:** Utilizes zero-shot extraction to pull line items and complex data automatically, reducing human error.
- **Scalability for Growth:** Specifically tailored to meet the needs of SMEs and mid-market firms looking to professionalize their finance workflows.

B. Value Proposition of Foxit Open-Source SmartAP

Open-sourcing a project like **SmartAP** serves as a powerful bridge between Foxit's high-performance technology and the real-world operational needs of modern businesses. This strategic approach offers value by providing a tangible, functional framework that demonstrates how to solve complex business problems using Foxit's AI and PDF capabilities.

a. Demonstrating "Real-World" Technology Impact

- **From Sample Code to Solutions:** Unlike isolated sample code, an open-source business application provides a complete blueprint for end-to-end workflows like invoice matching and automated approvals.
- **Showcasing Performance:** It allows businesses to see Foxit's high-fidelity rendering and fast parsing engines in action within a demanding enterprise environment.
- **AI Integration Evidence:** It highlights how Foxit AI can move beyond simple chat to perform complex tasks like zero-shot data extraction and risk mitigation in financial workflows.

b. Accelerating Business Innovation and Adoption

- **Lowering Barriers to Entry:** Businesses can "start small" with the open-source community version to test feasibility before migrating to a fully supported enterprise-grade implementation.
- **Speed to Market:** Developers can adapt the SmartAP codebase to their specific needs, significantly reducing the time required to build custom AP automation from scratch.
- **Cost Efficiency:** Utilizing open-source frameworks for critical platforms can save firms up to 3.5 times the cost of building from proprietary scratch.

c. Building a Trustworthy and Agile Ecosystem

- **Transparency and Security:** Publicly available code invites community monitoring, which helps identify and close security gaps faster than closed proprietary systems.

- **Flexibility and Choice:** Open-sourcing ensures that businesses are not "locked in" to a single vendor's roadmap; they have the freedom to modify and extend the application as their requirements evolve.
- **Shaping the Future:** It encourages contributions from users across industries (Finance, Healthcare, Legal), allowing the technology to evolve based on actual user needs rather than theoretical features.

d. Empowering the Developer Community

- **Skill Development:** Providing complete applications helps developers master Foxit's multi-platform SDKs (supporting Windows, Mac, Linux, Web, Android, and iOS) in a practical context.
- **Developer-Friendly Integration:** It demonstrates how easily Foxit's REST APIs can be chained together for low-code or no-code environments.
- **Access to Talent:** Active participation in open source connects Foxit with a global pool of skilled developers who are passionate about advancing document technology.

C. Technical Core: The Foxit Advantage

The application's intelligence is built on a foundation of high-performance document services:

- **Foxit OCR API:** Converts scanned receipts and image-based PDFs into machine-readable text with high precision.
- **Zero-Shot Data Extraction:** Utilizing AI to automatically identify and extract line items, vendor details, and tax amounts without requiring pre-defined templates for every vendor.
- **PDF Flattening:** Ensures document integrity and security by merging form fields and annotations before final archiving or payment.

D. Key Product Features

a. Intelligent Dashboard

The command center provides real-time visibility into the AP pipeline.

- **Key Metrics:** Tracks **Total Invoices**, **Pending Approvals**, and **Risk Flags**.
- **STP Rate:** Monitors the percentage of invoices processed without human intervention
- **Quick Actions:** Enables one-click access to **Upload Invoices**, **View POs**, and **Analytics**.

b. Automated Invoice Matching & Reconciliation

SmartAP replaces manual verification with an automated three-way matching logic.

- **PO Matching:** Automatically links invoices to existing Purchase Orders (e.g., matching Invoice INV-2024-2284 to PO-TECH-001).
- **Discrepancy Detection:** AI flags mismatches in pricing, quantity, or vendor information.
- **Confidence Scoring:** Provides an **Overall Score** for matches (e.g., 99% match) based on vendor, amount, and line item accuracy.

c. Advanced Extraction & Logging

Users can dive deep into individual documents to verify AI performance.

- **Line Item Detail:** Granular extraction of descriptions, SKUs, quantities, and unit prices (e.g., Cloud Storage, Laptops).
- **Processing Logs:** Transparent "Step-by-step" logs that show the exact time and status of upload, extraction, and matching stages.

E. Operational Workflow

Stage	Description	AI/API Role
Ingestion	Invoices are uploaded via the "Quick Actions" portal.	Foxit OCR
Extraction	System identifies 10+ fields including Net Amount, Tax, and Due Date.	Zero-shot AI
Verification	Invoice is cross-referenced with POs in the database.	Logic Engine
Approval	High-confidence matches are auto-approved; others enter the "Approval Queue".	Decision AI

F. Security & Risk Management

SmartAP prioritizes financial integrity through:

- **Risk Flags:** Detecting potential duplicates or fraudulent billing patterns.
- **Vendor Profiles:** Managing risk scores and payment rates for every supplier (e.g., "Acme Office Supplies" vs "Unknown").
- **Audit Trails:** Every action is logged, providing a clear path for compliance and internal audits.

2. Dashboard (Executive Overview)

The primary landing page that displays high-level metrics. It tracks total invoices, pending approvals, risk flags, and the STP rate while providing "Quick Actions" for common tasks.

3. Invoice Management & Detailed View

This section details the invoice repository where users can filter and manage all documents.

8. Technical Processing Logs

A transparent audit trail that shows "under-the-hood" events. It provides step-by-step logs for every document stage: upload, extraction, matching, and decision.

9. Matching Settings (Configuration)

Dictates the "Business Rules" of the AI. This section allows users to tune scoring weights for vendors, amounts, and dates, and set thresholds for what the AI can auto-approve versus what requires human review.

Scoring Weights

Weights are normalized automatically (current sum: 1.00).

Vendor Weight

0.3

Amount Weight

0.3

Line Items Weight

0.3

Date Weight

0.1

Candidate Selection

Controls which POs are considered for matching.

Vendor Fuzzy Threshold (0-1)

0.8

Candidate Amount Tolerance (±, 0-1)

0.2

Score Tolerances

Controls how score components are computed.

Amount Match Tolerance (±, 0-1)

0.05

Date Tolerance (days)

30

Line Item Match Threshold (0-1)

0.7

Line Item Amount Tolerance (±, 0-1)

0.1

Page | 32

Thresholds

Controls match type classification and review decisions.

Exact Threshold

Good Threshold

Acceptable Threshold

Review Threshold

AI & Discrepancy Policy

Controls AI involvement and strictness on discrepancies.

Use AI for ambiguous matches

AI can approve or flag fuzzy/partial cases.

AI Confidence Threshold (0-1)

Max Amount Discrepancy for Auto-Approve

Block approval on critical discrepancies

If enabled, any critical discrepancy forces review.

Risk Settings

Configure risk detection thresholds and component weights.

Restore Defaults

Save Changes

Component Weights

Controls how much each risk dimension contributes to the overall score (current sum: 1.00). Should sum to 1.00.

Duplicate Detection

Vendor Risk

Price Anomaly

Amount Risk

PO Matching Risk

Pattern Risk

Price Anomaly Detection

Flags invoices with unusual amounts compared to vendor history.

Std-Dev Threshold

Number of standard deviations above the historical mean to flag.

Min Historical Invoices

Significant Amount (\$)

Only flag invoices above this dollar amount.

Minor (%)

Major (%)

Critical (%)

Duplicate Detection

Controls look-back windows and amount tolerance for finding duplicates.

Exact Duplicate Look-back (days)

Fuzzy Duplicate Look-back (days)

Amount Tolerance (0-1)

e.g. 0.02 = $\pm 2\%$ tolerance when comparing amounts.

Vendor Risk

Thresholds for classifying vendor risk levels and activity windows.

Low Risk ($\leq$)

0.25

Medium Risk ($\leq$)

0.5

High Risk ($\leq$)

0.75

Good Payment Reliability (0-1)

0.9

Acceptable Payment Reliability (0-1)

0.75

Inactive Vendor (days)

180

New Vendor Window (days)

90

Vendors with no activity in this many days are flagged as inactive.

Vendors onboarded within this window are considered "new."
